🌐 [bignimbus](#)

My coworkers would describe me as outgoing, personable and passionate about user interfaces. Developing software is hard and expensive, but conversation is easy and cheap. In the planning process, I try to be a part of the conversation early to get a handle on the business case for the feature. This helps me deliver software that has the highest impact at the lowest cost possible. As a former teacher and musician, I know how important communication and creativity are to the success of the team. An ideal role would put me in a position to mentor, manage, and recruit teammates while shipping features to production.

### SKILLS

#### Engineering leadership

public speaking training  
removing bias from hiring process  
software fundamentals agile  
performance rubrics tdd

#### UI development

javascript html 5 es6+  
react web audio api  
media streams jest jasmine  
angular.js jquery sass less  
stylus css/svg/smil animations  
bem

#### Server development

node.js express ruby rails  
rspec postgresql graphql  
socket.io webrtc webpack  
babel

#### Web platform

accessibility internationalization  
dev tools responsive design  
performance optimization  
browser compatibility

### WORK EXPERIENCE

Senior Software Engineer at Opternative

January 2018 - Current

<https://opternative.com>

- Key contributor and innovator to the development of "Single Device Over Refraction," the first-ever application of pure HTML5 technology to create a 100% voice user interface on the web available to the public
- Create, evangelize, and maintain modern front-end architecture for various production features and applications
- Rapidly prototype cutting-edge user interfaces early in a product's lifecycle to ensure designers and other stakeholders can agree on a consistent vision that takes full advantage of the web browser's capabilities
- Advise other engineers on database schema and data modeling best practices
- Contribute to candidate interviews, colleague evaluations, and personnel decision-making
- Overhaul team metrics gathering by collecting and gathering qualitative and quantitative information pertaining to the software engineering process
- Mentor and teach teammates through one-on-one sessions and group lunch-and-learns on a variety of software development best practices, with an emphasis on front-end development techniques
- Contribute patches to under-maintained open-source projects to drive company initiatives forward without having to reinvent the wheel (and improving company visibility to the developer community)
- Drive revenue by mining production data and third-party analytics services to identify opportunities and implement solutions to improve outcomes for users
- Facilitate international expansion by coordinating technical management of static assets and translation dictionaries for English, Spanish, and German

Software Engineer at Opternative

August 2015 - December 2017

- Pushed and empowered teammates to incorporate principles in the Agile Manifesto in different aspects of the software development lifecycle
- Proactively improved low-level code quality and consistency by implementing git hooks, linters, and documentation for Ruby, JavaScript, and CSS/Sass/SCSS
- As the first remote-only employee, established a model for effective off-site collaboration within the engineering team and throughout the rest of the company
- Designed, developed, and deployed the first iteration of the Opternative Engineering Blog (currently offline, version 2 coming soon)
- Audited entire marketing site for accessibility issues, reported findings to the team, created user stories for actionable items, and executed those items to ensure compliance and broad usability
- Quarterbacked transition from Angular 1.2 + Sprockets to React + Babel + Webpack and other modern UI development best practices
- Planned and taught a biweekly "learn to code" course for non-engineering colleagues
- Generate technical specifications, detailed implementation plans, user stories, and estimates for large units of work
- Created the company's first live style guide to facilitate higher-quality design-developer interactions, code reuse, and UI consistency

Junior Front End Developer at Discovery Education  
<https://discoveryeducation.com>

*July 2014 - July 2015*

- Developed prototype and production code for a distributed, infographic-heavy data visualization feature
- Conceived, built, and deployed a "Styleguide as a Service" for bootstrapping new applications and rapid prototyping with a small team of designers and developers
- Develop and maintain features and unit tests in a variety of education webapps using Backbone, Marionette, and ColdFusion
- Improved software development speeds by identifying areas of high technical debt and refactoring those to comply with team norms and best practices

Music Teacher; Arts Liaison at Chicago Public Schools

*August 2012 - June 2014*

Music Teacher at South Brunswick Public Schools

*August 2008 - June 2012*

## EDUCATION

---

Bachelor of Music Music Education at The College of New Jersey (Ewing, NJ)  
2004 - 2008

magna cum laude
